

SIT327 - Network Forensics

HD Task: Network Forensics Project

Overview

During the final stage of the trimester, we will embark on a comprehensive project focused on the field of network forensics. This is an opportunity for you to apply your knowledge creatively, and you are encouraged to put forward your own project ideas. To ensure the feasibility and academic merit of your proposed project, especially if you are aiming for a high distinction (HD), a consultation with your tutor is mandatory. Along with our discussion, you will need to provide a detailed report of your project for review and feedback.

Your project can encompass a wide array of concepts within network forensics, such as:

- The practical implementation of methodologies or algorithms presented in academic papers.
- The exploration of innovative ideas or techniques that could advance the field of network forensics.
- The development of a new forensic analysis scenario or the creation of a test bed that could serve as a valuable educational resource for future students in this course.

A research report includes the following components:

Title: A concise and descriptive title that clearly conveys the topic and focus of the research.

Introduction: An overview of the research problem or question, providing background information and context to establish the significance of the study.

Research Objectives: Clear and specific statements outlining the aims and objectives of the research, including the main research question or hypothesis.

Literature Review: A comprehensive review of relevant literature and existing research on the topic (At least 3 new research papers), highlighting gaps, controversies, and areas for further investigation.

Methodology: A detailed description of the research methods and approaches to be used, including data collection methods, analysis techniques, and any tools or instruments to be employed and include a flowchart of the methodology in addition to the text.

Outcomes: Describe results or findings of the research and their potential implications for theory, practice, or policy.

References: A list of the sources cited in the proposal, following a consistent citation style (e.g., APA, MLA).

Submission:

To proceed, please prepare and submit the following:

A project report (under 1000 words), and a recorded presentation of your project.

Research Proposal Assessment Rubric

Note:

- Students can choose a limit of 1000 words or 4 pages. References are not counted into this limit.
- For the HD task demonstration, you can use Deakin Panopto for recording and include the video link in your report.

Criteria	Excellent	Good	Satisfactory	Needs Improvement
Introduction	Provides a compelling and well-articulated overview of the research problem, offering clear background context and significance. (16-20 points)	Provides a clear introduction with adequate background information but lacks depth in context or significance. (13-15 points)	Introduction provides some context but lacks clarity or depth in explaining the research problem. (9-12 points)	Introduction is unclear, missing key background information, or fails to establish the significance of the study. (0-8 points)
Research Objectives	Objectives are well-defined, specific, and aligned with the research question or hypothesis. (8-10 points)	Objectives are clear but could be more precise in defining the research focus. (6-7 points)	Objectives are somewhat vague or broad, requiring better alignment with the research question. (5 points)	Objectives are unclear, poorly formulated, or missing. (0-4 points)
Literature Review	Provides a thorough review of relevant literature, incorporating at least three new research papers, and effectively identifies gaps, controversies, and areas for further research. (16-20 points)	Reviews relevant literature with minor gaps or lack of depth in discussing gaps and controversies. (13-15 points)	Literature review is somewhat limited, lacking depth in identifying gaps or controversies; fewer than three new research papers are included. (9-12 points)	Literature review is minimal or missing, failing to engage with relevant research or identify key gaps. (0-8 points)
Methodology	Detailed and well-structured description of research methods, including data collection, analysis techniques, and instruments; methodology flowchart is well-designed and informative. (16-20 points)	Clearly describes research methods and analysis techniques, but some details or justification are lacking; methodology flowchart is present but could be more detailed. (13-15 points)	Methods are described but lack clarity, justification, or completeness; methodology flowchart is unclear or missing key elements. (9-12 points)	Methodology is vague, poorly explained, lacks a flowchart, or fails to provide necessary details. (0-8 points)
Outcomes	Clearly articulates anticipated results and their implications for theory, practice, or policy with strong justification. (16-20 points)	Provides anticipated outcomes but lacks depth in explaining their significance. (13-15 points)	Expected outcomes are vaguely stated and lack strong justification or relevance. (9-12 points)	Expected outcomes are unclear, missing, or not linked to research significance. (0-8 points)
References	Includes a properly formatted reference list using a consistent citation	Reference list is well-structured and mostly adheres to a citation	References are included but lack consistency in	References are missing, incomplete, or improperly formatted.

	style (e.g., APA, MLA), with high-quality and relevant sources. (8-10 points)	style, but minor inconsistencies are present. (6-7 points)	formatting or relevance. (5 points)	(0-4 points)
